

TankMatic

Electronic Tank Level Gauge

The TeeJet Technologies TankMatic is an Easy-to-Use and highly precise electronic tank level gauge based on our 15 years experience in tank level monitoring. TankMatic performs automatic tank calibration on any tank shape with 100 calibration points and 1000 measurement points which ensures extreme precision.

Benefits and Features:

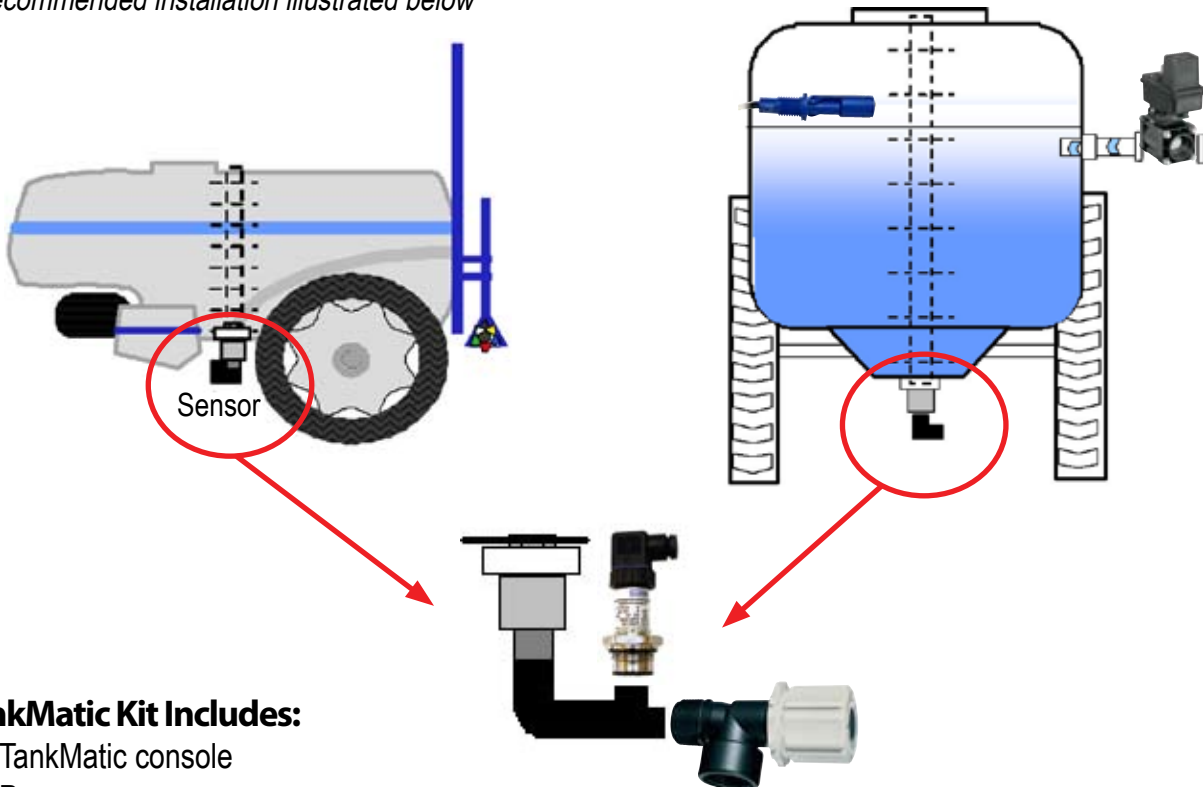

- Simple and precise electronic tank level gauge
- Measurement with a highly sensitive pressure sensor
- Automatic calibration for any tank shape
- High precision – 100 calibration points and 1000 measurement points
- Measures the exact tank contents independently of the filling mode
- Automatic filling by means of optional fill valve
- Overflow protection during filling
- Tank content readout in one liter steps
- Density correction for liquid fertilizer

Installation*

- The console can be installed in the tractor cab or outside the tractor cab on the sprayer.
- The sensor is installed at the bottom of the tank with a minimum 30 cm from the suction point to avoid turbulences.
- The sensor should be mounted vertically.
- The sensing membrane should be mounted downwards.
- A High Level Security Switch (included in the kit) can be mounted on top of the tank to prevent over filling.

* Recommended installation illustrated below

TankMatic Kit Includes:

- TankMatic console
- Pressure sensor
- Overflow switch
- Complete cabling
- User manual

How to order

Part No.	Description
910-402-UK	TeeJet TankMatic; Complete Kit
B56602-11-26-D	Optional filling valve 1-1/2"
